SECOND EDITION July 30, 1978

All of the information contained in
 the first edition and the supplement
 is collected in this second edition.

SPECIFICATIONS

	RE-201	RE-101
Supply Voltage	100/117/220/230/240V, 50/60Hz	
Power Consumption	16W	15W
Dimensions	415(W) x 275(D) x 185(H)mm 16.5(W) x 10.8(D) x 7.3(H)in	
Weight	9.5Kg, 2.1 lbs.	9.2Kg, 2.0 lbs.
Accessories	Connection Cord (2) Foot Switch (FS-1) Endless Tape (RT-1) Cleaner Vinyl Cover	
S/N Ratio	60dB - "A" weighted	

INPUT

	MIC	INSTRUMENT	FROM PA
Input Level	-50dBm(2.4mV)	-24dBm(44mV)	-24dBm(44mV)
Input Impedance	0.9Kohm	16Kohm	100Kohm

OUTPUT

	H	M	L
Output Level	-15dBm(140mV)	-23dBm(54mV)	-35dBm(14mV)
Output Impedance	1.4Kohm	1.5Kohm	0.5Kohm

RE-201

MOTOR

Initially — CDM-131019 (not available now)
Serial No. 331200 and higher — M-502E-B02
See page 8 for replacing CDM-131019 by M-502E-B02.

RE-101

MOTOR

Initially — CDM-131019 (not available now)

Serial No. 330300 and higher— M-502E-B02

See page 8 for replacing CDM-131019 by M-502E-B02.

TO REPLACE MOTOR CDM-131019 BY M-502E-B02
 Motor CDM-131019 that was initially used is no more available. If it is necessary to replace the motor, use M-502E-B02. Mount it by use of an adaptor as shown in the photo below and by adding a motor circuit adaptor as shown on the left.

TAPE PACK CHASSIS ASSEMBLY

This drawing shows tape pack chassis assembly for SERIAL NO. 573700 AND HIGHER.

For SERIAL NO. UP TO 563699, parts encircled slightly differ.

They can be interchangeable except for (11) and (15) that should be replaced as a set.

TAPE PACK CHASSIS ASSEMBLY

NO.	PARTS NO.	PARTS NAME AND DESCRIPTION
01	120-036	Nut, Decoration, M3
02	123-004	Screw, Decoration, M3
03	092-004	Top cover No.4, pack (acrylic)
04	079-004	Frame No.4
05	079-005	Frame No.5
06	079-006	Frame No.6
07	079-007	Frame No.7
08	079-008	Frame No.8
09	079-009	Frame No.9
10	079-010	Frame No.10
(11)	070-033	Leaf spring No.33
12	101-017	Felt No.17
(13)	061-063A	Chassis No.63A
(14)	065-113	Cover, Bearing
(15)	113-004	Bearing
16	063-011	Plate No.11
17	070-017	Spring No.17, Support for chassis
18	070-018	Spring No.18
(19)	*	Collar (plastic), M3 x 6mm
(20)	120-001	Sleeve Nut No.1, 10mm
21	*	Screw, B.H. M3 x 12mm, Nickel
22	*	Screw, B.H. M3 x 15mm, Chrome
23	*	Screw, B.H. M3 x 6mm,
24	*	Screw, O.H. M3 x 15mm, Nickel
25	*	Screw, B.H. M3 x 6mm,
26	*	Screw, T.H. M2.6 x 4mm, Nickel
27	*	Plain washer M3 x 8 x 0.5mm
(28)	121-035	Plain washer No.35, M3 x 8 x 0.3mm Phosphor bronze
29	*	Spring washer M3
30	*	Nut, Hex M3
31	070-005	Spring No.5
32	*	Screw, B.H. M3 x 18mm
33	101-008	Felt Chip No.8
(34)	101-026	Felt No.26
(35)	*	Screw, SEMS M3 x 8mm, Chrome (wire spring washer)
36	107-004	Cushion No.4

NOTE: *(15) is slightly smaller in height than older (15). When replacing (15), replace (11), too.

ADJUSTMENT AND CHECKING

1. MECHANICAL ADJUSTMENT

1-1. TAPE CHASSIS POSITION

Adjust the tape chassis position so that the clearance from the motor shaft is 1mm. See Fig.1. Secure it by tightening 2 screws at the rear section of the chassis.

Fig. 1

1-2. TAPE CHASSIS HEIGHT (TEMPORARY)

Adjust the tape chassis height so that it is 10.5 ± 0.5 mm above the main chassis. See Fig.2. (Make sure that Frame No.8 is not deformed)

Fig. 2

1-3. LEAF SPRING PRESSURE

Adjust position of Frame No.10 so that the tension to separate the leaf spring from the bearing roller is 25-30g. See Fig.3.

Fig. 3

1-4. POSITION OF FRAMES NOS.7, 8, AND 9

Secure the frames as illustrated in Fig.4.

CAUTION: Make adjustment of position of Frames Nos. 7 and 8 accurately with the pinch roller in contact with the motor shaft.

Fig. 4

1-5. PINCH ROLLER PRESSURE

Plug in the power cord and turn switch on.

Adjust the solenoid position so that the tension to separate the pinch roller from the motor shaft is 1.0-1.4kg, using a spring balance. See Fig.5.

CAUTION: Make sure that pinch roller surface is perfectly parallel with the motor shaft.

Fig. 5

1-6. TAPE PACK HEIGHT (FINAL)

- a) Thread the tape and run it.
- b) Consulting Fig.6, visually adjust the head alignment. (This alignment must be made first, otherwise tape cannot run stably.)

Adjust head gap so that it is:
 1. vertical to platform, and
 2. located at the center of the tape.

- c) For products without cutting on Leaf Spring;

Adjust Frame No.10 so that the tape passes right below the flange edge of the bearing roller.

- d) For products with Spring around Height Adjust Screw:

Adjust Screw A:
 Make sure that the tape travels with its lower edge $1 \pm 0.2\text{mm}$ above Frame No.8, measured at the pinch roller side.

The Frame No.8 height is adjusted by Height Adjusting Screw "A".

After adjustment of step 1-2, there would be no need of turning the screw so much.

If it happens that due to adjustment of this step, the height of tape chassis largely deviates from 10.5mm, there might be another problem to be solved.

2. ELECTRICAL ADJUSTMENT

2-1. TRAP COIL

Adjust Trap Coil (L21) so that bias leakage at Point "A" (R48, 6.8Kohms) is below 2.5Vrms. If the voltage cannot be lowered than the level, replace C37 (470p) with a new one.

2-2. HEAD ALIGNMENT

Before attempting the following electrical adjustment, make sure that mechanical head alignment is perfected.

(a) Run the tape and adjust Record and Playback Heads with alignment screws so that their gaps are completely perpendicular to the edge of the running tape, and that all heads' gap-width dimensions are centered on the tape path.

(b) While monitoring an individual waveform on a scope, adjust alignment screws to obtain maximum output at high frequencies.

The ideal is for all playback heads' output to be equal in levels. Difference in the levels should be minimized by reducing the output of head with higher output. To reduce the output level, center off slightly the playback head's gap from the track.

When doing so, be careful not to cause ill affect on the high frequency response by tilting or azimuth error.

2-3. RECORDING BIAS/CURRENT

Feed sine wave signal, -50dB to input.

(a) Recording Bias

Adjust VR21 for maximum output.

(b) Recording Current

Adjust VR11 for -12dBm output.

2-4. DIRECT OUTPUT CHECKING

Remove the Blank Plug from FROM PA jack. Turn Echo Volume fully counterclockwise. Make sure that direct signal output is $-15\text{dB}\pm 1\text{dBm}$.

2-5. PEAK LEVEL/ LEVEL METER

a) PEAK LEVEL (RE-201 only)

Adjust VR22 so that LED lights dimly at -50dB input signal and goes off completely at -48dB input.

b) LEVEL METER

Adjust VR23 for 0dB reading on Level Meter at -50dB input.

2-6. INSTRUMENT INPUT jack

Feed 1KHz, -24dBm sine wave to INSTRUMENT Input jack. Check to see that the outputs are as shown below.

SELECTOR	OUTPUT
ECHO	-15dBm
NORMAL	-12.5dBm

2-7. INTENSITY

Adjust VR12 so that multiple repetition of noises occurs with Intensity Control as shown.

Other Reference Data

Bias Voltage 50 - 60Vrms across Erase Head.

Tape Speed 12cm - 40cm/sec (approx)

Tone Control: Treble... $\pm 10\text{dB}$ at 5KHz

Bass $\pm 10\text{dB}$ at 100Hz

PARTS ORDERING INFORMATION

Name of part number of some of the parts is changed from those printed on previously issued parts list. When ordering replacement parts, be sure to follow the description on the present issue.

When ordering parts, be sure to include the following information:

1. Model and Serial Number
2. Part Number
3. A Description of the Part

This parts list includes all standard stock replacement parts. No attempt has been made to include every nut, bolt and screw. If the necessity for a non-listed part arises, please write describing the parts location and function as well as model and serial number of the unit.
